

PocketCirc® Remote Circulation

Getting your library staff out from behind the circulation desk.

If the size of SirsiDynix PocketCirc® remote circulation management isn't convenient enough, its functionality makes it the dream tool for all your circulation staff. Perfect for line control on a busy day, or for accessing your ILS from offsite special events, schools, bookmobiles or other remote outreach programs, PocketCirc mobile circulation allows librarians to remotely check out, renew, charge or inventory materials with this handheld scanning device.

PocketCirc® Remote Circulation Features

When using PocketCirc remote circulation on your mobile handheld device, your library staff can:

- In online or offline mode, receive updated user profile information and status alerts for blocked or delinquent patrons when checking out items
- Backdate bookdrop items, display discharged item IDs and more
- Locate routing and availability information on transit items
- Review the "check item status" list for a running list of all items scanned in this mode, including the status of each item and what action needs to be performed

If you're onsite, it adds mobility, enabling your staff to perform circulation functions throughout your facility. And if you're off site? No problem. PocketCirc remote enabler will store your actions and information, then sync with your system once you return to the library.

With SirsiDynix PocketCirc remote circulation management, your library staff gains:

- Easy online or offline access to key circulation and inventory functions
- Support for various Windows Mobile and Windows CE-supported devices
- Freedom to roam, so staff can get out from behind the circulation desk and into the stacks to help users, conduct daily circulation procedures or large inventory projects.

Whether during annual inventory or a library opening, in daily circulation tasks or unconventional uses around the library, PocketCirc mobile circulation will empower library staff to serve better and more efficiently. This sophisticated patron outreach solution enables you to bring the library to your users, wherever they may be.
